ABSTRACT

Performance measurement systems are an important item in implementation of good governance for improvement of government accountability. This paper aims to evaluate performance measurement systems for central government in Indonesia. The research methodology is library research. The literature included literature about performance measurement systems and law about the systems. The result indicates that the Central Government in Indonesia has a model of performance measurement systems called sistem akuntabilitas kinerja instansi pemerintah (SAKIP). SAKIP includes overall stage in performance measurement systems. However, SAKIP still has weaknesses.

Keyword: performance measurement systems, performance report.
